PLOT PLAN

This is to certify that a percolation test has been run and an on site inspection made by the Mecklenburg County Health Department on the lot described above. The said test was conducted in that portion of the lot as indicated on above plot.

The percolation rate determined by the test was 40*min/in. The said lot is approved for the installation of an individual septic tank wastewater treatment system with subsurface soil absorption effluent discharge subject to the following terms and conditions:

1. A permit to install the system applied for shall be issued by the Mecklenburg County Health Department prior to beginning any construction of building or the wastewater treatment system on the lot.
2. The size of the septic tank wastewater treatment system which must be installed will be determined by the Health Department prior to issuance of a permit on the percolation rate obtained above and on the size and type of building constructed thereon.
3. This approval is valid only for the system installed in the immediate area where the percolation test was run.
4. This approval and any existing permit may be rescinded including the drilling of a well, if performed on the lot which in the opinion of the Health Department renders the area where the percolation test was run unsuitable for the installation, operation, alteration, and/or repair of such a system.

This approval is granted based on the laws of the State of North Carolina and the rules and regulations of the North Carolina State Board of Health and the Mecklenburg County Board of Health which were in effect on the date of issuance and is void if at any time in the future, prior to the completion of the system, these laws, rules and regulations are changed such that this approval would not have been granted had the new or revised laws, rules, and regulations been in effect on the issue date.

*Results ~~were~~ determined by soil analysis.

The above specified lot is approved by the Mecklenburg County Health Department for the installation of an individual septic tank system with subsurface soil absorption effluent discharge based on the percolation test results which yielded a percolation rate of 60Min./In. on an on site inspection of the said lot, and upon the information supplied in the "Application for an Installation Construction, Alteration and/or Repair Permit number 7590. This approval is subject to the following terms and conditions

1. That the nitrification field be installed, constructed, altered, and or repaired in the same area where the percolation test was run
2. That an "Installation, Construction, Alteration, and or Repair Permit" be issued and in full force and effect when the system is installed, constructed, altred, and or repaired and that the system be installed in accordance with same

This approval may be revoked and the building inspection department requested to revoke any building permit(s) which have been issued to authorize construction on the said lot if at any time it is determined that any information contained in the "Application for an Installation, Construction, Alteration, and/or Repair Permit" is not correct or is untrue or that the septic tank system is not being installed, constructed, altered and or repaired in accordance with a valid Installation, Construction Alteration, and/or Repair Permit
