From: W. R. Marlin, Soil Scientist

A visit was made to lot 3, 10911 Idlewild Road (Brandonwood) for the purpose of a soil investigation on a portion of the lot. Fill material is present on the end of the lot adjacent to the gravel road. Borings confirmed the presence of provisionally suitable soil material below the fill. It is recommended that the bulk of the fill material be removed if drain lines are installed in this area. Soils have clay subsoils, blocky structure, are deeper than thirty-six inches to saprolite and ground water, and have approximately an eight percent slope. This area extends approximately seventy feet into the property from the gravel road.

Dear Sirs:

At your request, a field investigation was conducted on the property designated above. The soils on the property were found to contain a limited area of provisionally suitable soil for the installation of a ground absorption sewage disposal system. A copy of the site evaluation report is enclosed for your information.

Should you desire to file for permission to install a ground absorption sewage disposal system, please submit plot plans for the proposed construction, well, and ground absorption sewage disposal system to this office. They will be reviewed and if it is found that there is an adequate area of provisionally suitable soil to accommodate the proposed installation, an Improvements Permit will be issued by this office.

If I may be of assistance, please feel free to call.
