PHONE (704) 376-4603

FILE: 5296A DATE: 6/17/93

TC: 011 013 27 PP L

SERIAL Nº 15512

Permission is hereby given to ✓ Install or Construct, _____ Alter or Repair the individual septic tank wastewater treatment system with subsurface, soil absorption, effluent discharge as specified herein at the described location. This permit is granted based upon the information supplied in the application dated 6/8/93. All work shall be completed on or before 7/8/93, after which date this permit shall be null and void. The system shall meet all of the construction requirements of 10 NCAC 10A .1900 which are in effect on the date of the granting of this permit. A Certificate of Completion or an Operation Permit must be obtained from the Mecklenburg County Health Department before any system can be covered up or placed into service. The issuance of this permit does not in any way guarantee that the system anticipated to be constructed will operate properly, or relieve any person now or hereafter owning, controlling or using such system from any liability resulting from the failure of the system to operate properly.

PLOT OF SYSTEM

Liquid Capacity of Septic Tank 1500 gallons

Liquid Capacity of Dosing Tank 1000 gallons

Tank Construction PCC

Huntersville, NC 28078

RE: Property located on Ramah Church Road
FILE: 5296A
PARCEL: 011-013-27P0

Dear Mr. Francis:

At your request, a field investigation was conducted on the property designated above for the purpose of determining site suitability for the installation of a ground absorption sewage disposal system. The property was found to contain a limited area of soils which were classified as PROVISIONALLY SUITABLE for such an installation. A copy of the Site Evaluation Report (Serial Number 19319) is enclosed for your information.

While this classification indicates the site is acceptable for the installation of a septic tank system, no specific system or plans have been approved. The area available for such an installation may impose limitations on the size and/or type construction permitted on the lot. Specific plan approval will be provided upon submission of an Application for an Improvement Permit with an **ACCURATELY** dimensioned plot plan detailing the location of current and/or proposed buildings, wells and sewage disposal systems and determination that the area is adequate to accommodate the proposed construction.

Please note that this classification may be revoked if any filling, grading or construction (including the drilling of a well) is performed on the lot which in the opinion of this department renders any area previously designated suitable for system installation, unsuitable. Furthermore, this approval may be revoked should any changes occur in the regulations under which it was granted, if such changes would have prevented its approval had they been in effect on the date of issuance.

If there are any questions concerning this matter, please contact Bill Marlin, Soil Scientist at 336-5574.

Sincerely,

Kelly Randall, R.S., Soil Scientist

Dear Bill,

It was nice to have talked to you again and I am glad to hear that things are going well. As we discussed, please find enclosed all of the information that I think you will need to check the above mentioned site. As I said by telephone, the buyer is very anxious to get started with this building, so if you could check this site as soon as possible I would appreciate it.

I will be in touch by telephone.

Sincerely,

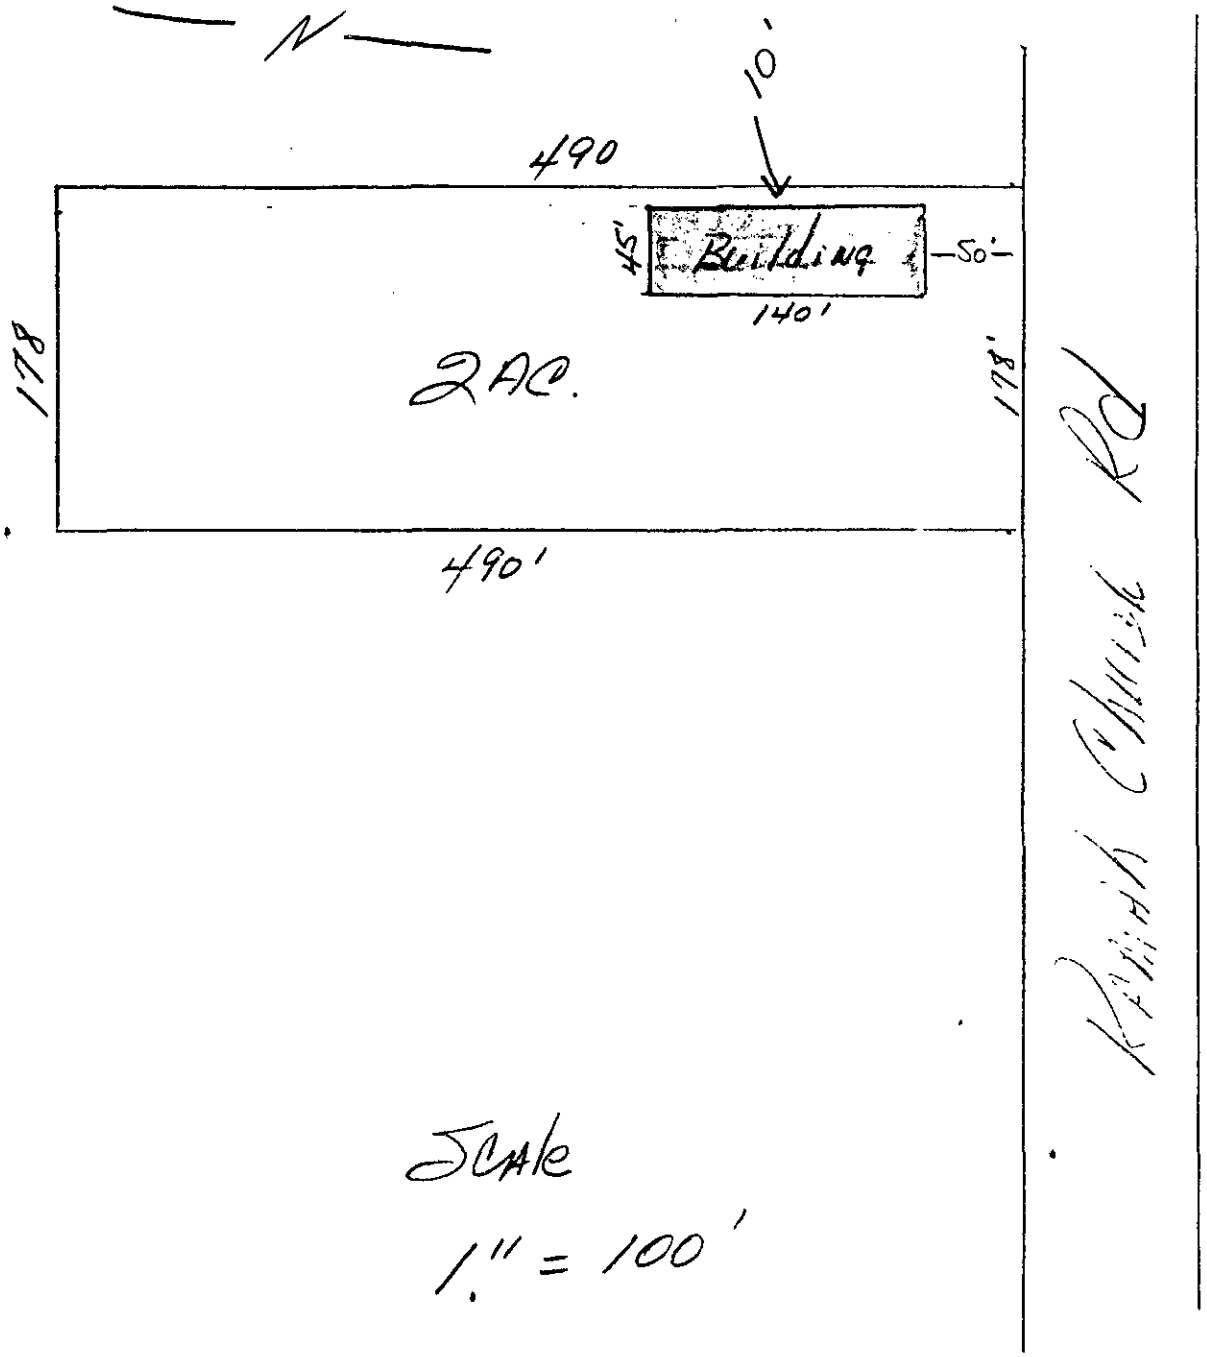

Irvin R. Hager

RE: File #5296A

Dear Mr. Francis:

A pre-preliminary investigation of soils and topography was made on the property (parcel 011-013-27) located on Ramah Church Road. A soils map was prepared and a copy is enclosed.

The areas shaded yellow on the enclosed map appear to be dominantly unacceptable for the installation of septic tank systems. These include soils with expanding clay and a drainageway-depression area.

The area of soils adjacent to Ramah Church Road has expanding clay minerals present. These swell upon becoming wet, reducing soil pore space. The soils are generally shallow, ranging in depth from eighteen to approximately thirty-six inches. Slopes range to approximately fifteen percent, but are generally somewhat flatter. Depth to ground water, saprolite, and restrictive horizons is greater than thirty-six inches.

The drainageway-depression area collects and channels surface runoff from the surrounding land areas. This area would not be adaptable for use with septic tank systems.

The small area shaded green on the map represents soils that might be considered for use with shallow-placed septic tank systems. The soils are shallow, ranging form approximately twenty-four to thirty inches to saprolite. Depth to ground water and restrictive horizons is greater than thirty-six inches. Slopes range to approximately twenty percent. This area is small in size.

The unshaded area appears to be dominantly acceptable for the installation of septic tank systems. These soils have clay subsoil horizons that are blocky with respect to structure. Depth to saprolite, ground water, and restrictive horizons is greater than thirty-six inches. Slopes range to approximately fifteen percent.

Based on this investigation, there are some areas on the tract that appear to be dominately acceptable for the installation of septic tank systems. Please note that this report does not express or imply individual lot approval for septic tank system installation. Individual lot approval is dependent in part on the satisfactory completion of an investigation of each lot. Currently, no lots are marked on the tract. Note also that soil delineations may be subject to change pending additional investigation with established reference points. Inclusions of soils other than those delineated may occur. Please contact me if there are any questions with regard to this report.

Sincerely,

William R. Marlin
