Cornelius, NC 28031

Dear Mr. Bustle:

A pre-preliminary investigation of soils and topography was made on a portion of the tract (parcel 001-091-03) located on Natalie Road. A soils map was prepared and a copy is enclosed.

The areas marked with yellow on the enclosed map appear to be dominantly unacceptable for the installation of septic tank systems. Included are a depression area and a sewer of ditches that act as terraces.

The depression area collects and channels surface water runoff. This area is not adaptable for the installation of septic tank systems.

The ditches on the tract collect and channel surface runoff also. They are too deep to be crossed by septic tank system drainlines. In several places the ditches are fairly close together and could cause problems not located precisely on the enclosed map.

The unmarked areas appear to be dominantly acceptable for the installation of septic tank systems. These areas have soils with clay subsoil horizons that are blocky with respect to structure. Depth to saprolite, ground water, and restrictive horizons appears to be greater than forty-eight inches. Slopes range to approximately fifteen percent.

Based on this investigation, there are areas on the tract that appear to be dominantly acceptable for the installation of septic tank systems. Please note that this report does not express or imply individual lot approval for septic tank system installation. No lots are currently established on the tract. individual lot approval is dependent in part on the satisfactory completion of an investigation of each lot. It is recommended that lots requiring both wells and septic tank systems be approximately one area in size. The lots will have to have a one-hundred percent repair area for any septic tank systems proposed. Please contact me if there are any questions concerning this report.

Sincerely,

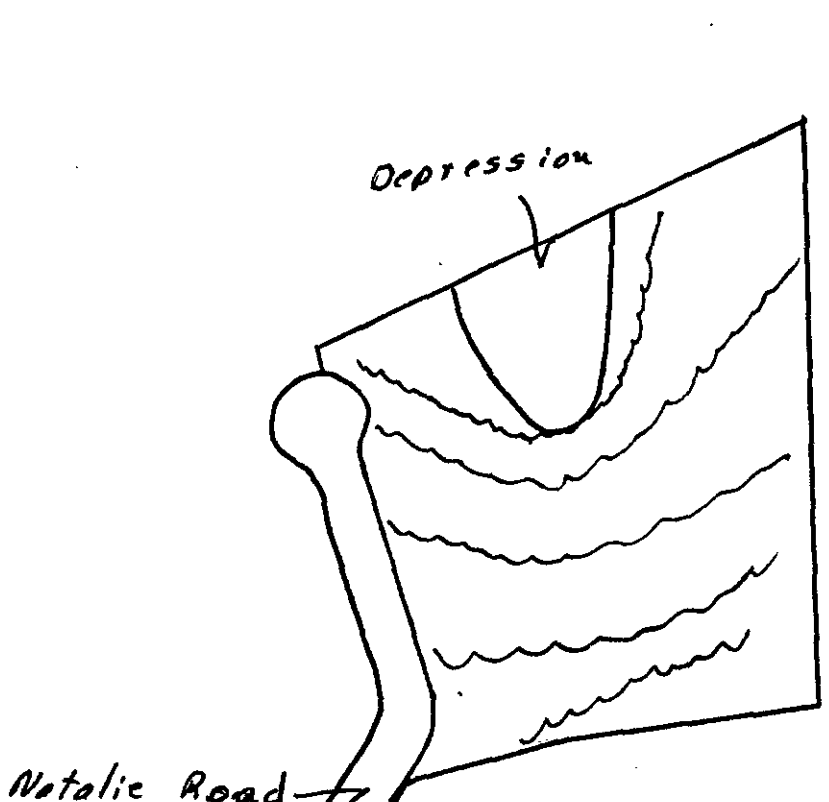

William R. Marlin
