File Review

Attach the most recent extent of contamination map for each constituent above either 2L groundwater standard or Maximum Soil Contaminant Concentration (MSCC). **02/2005 Attached**

Attach copies of groundwater flow maps. (Watch of seasonal change)

Attach a copy of the most recent summary table for soil/groundwater laboratory analysis **02/2005 Attached**

Is the source area identified in either the report text or on a site map? Attach map or if text only, indicated the location on an extent of contamination map.
Based on this information, answer the following questions:

Has the extent of contamination been defined or partially defined for all constituents-of-concern?

If **Yes**	**ARGU is a 1500-foot buffer around the maximum extent of contamination**

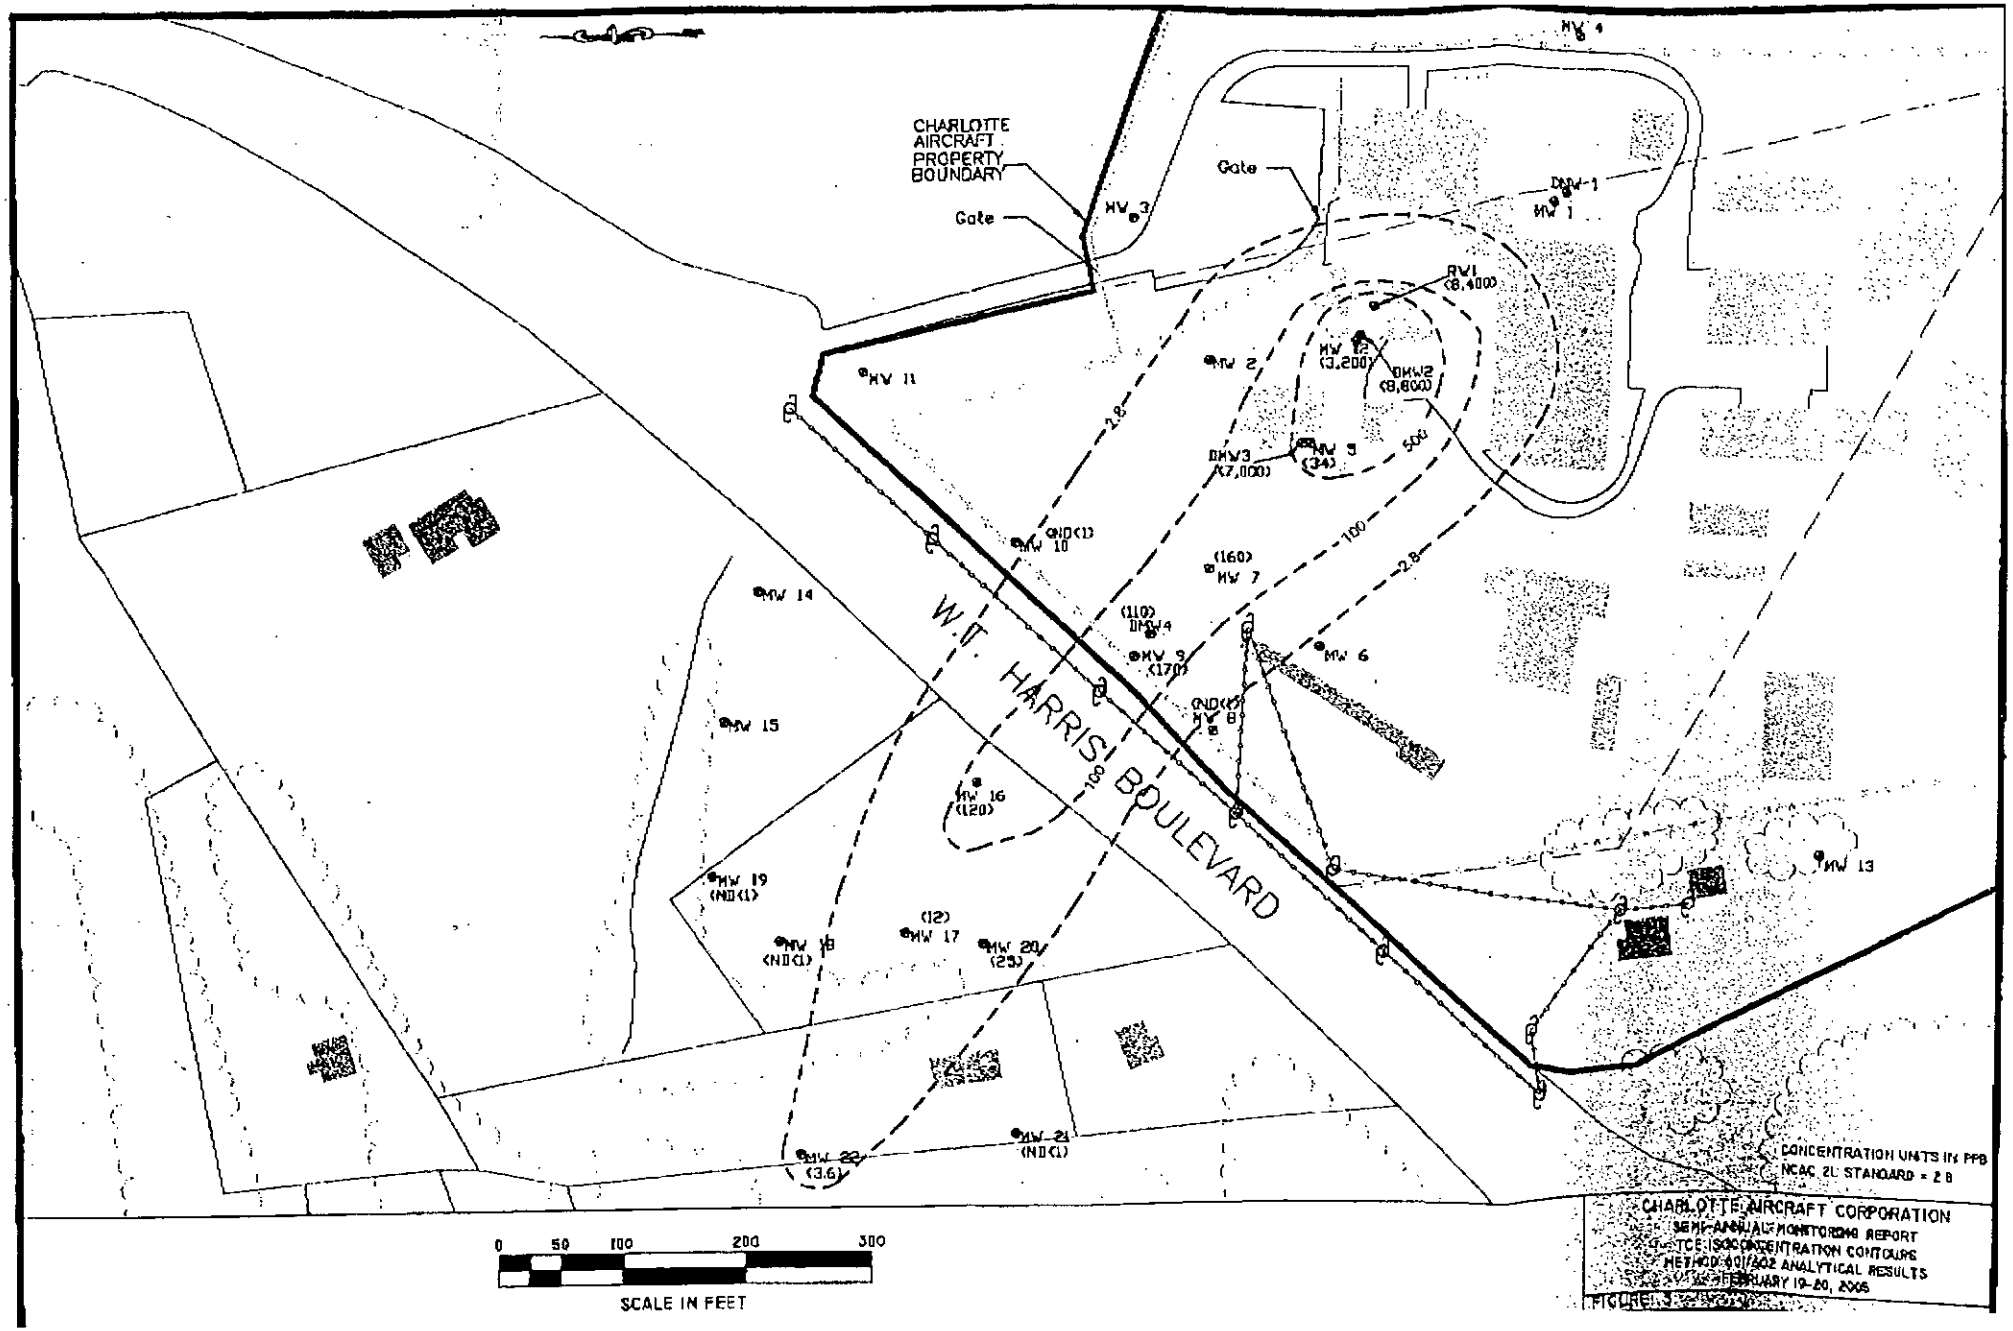

If No, is the source area defined?

If Yes	ARGU is a 1500-foot buffer around the source area
If No	ARGU is a 1500-foot buffer around the contamination site property boundary.

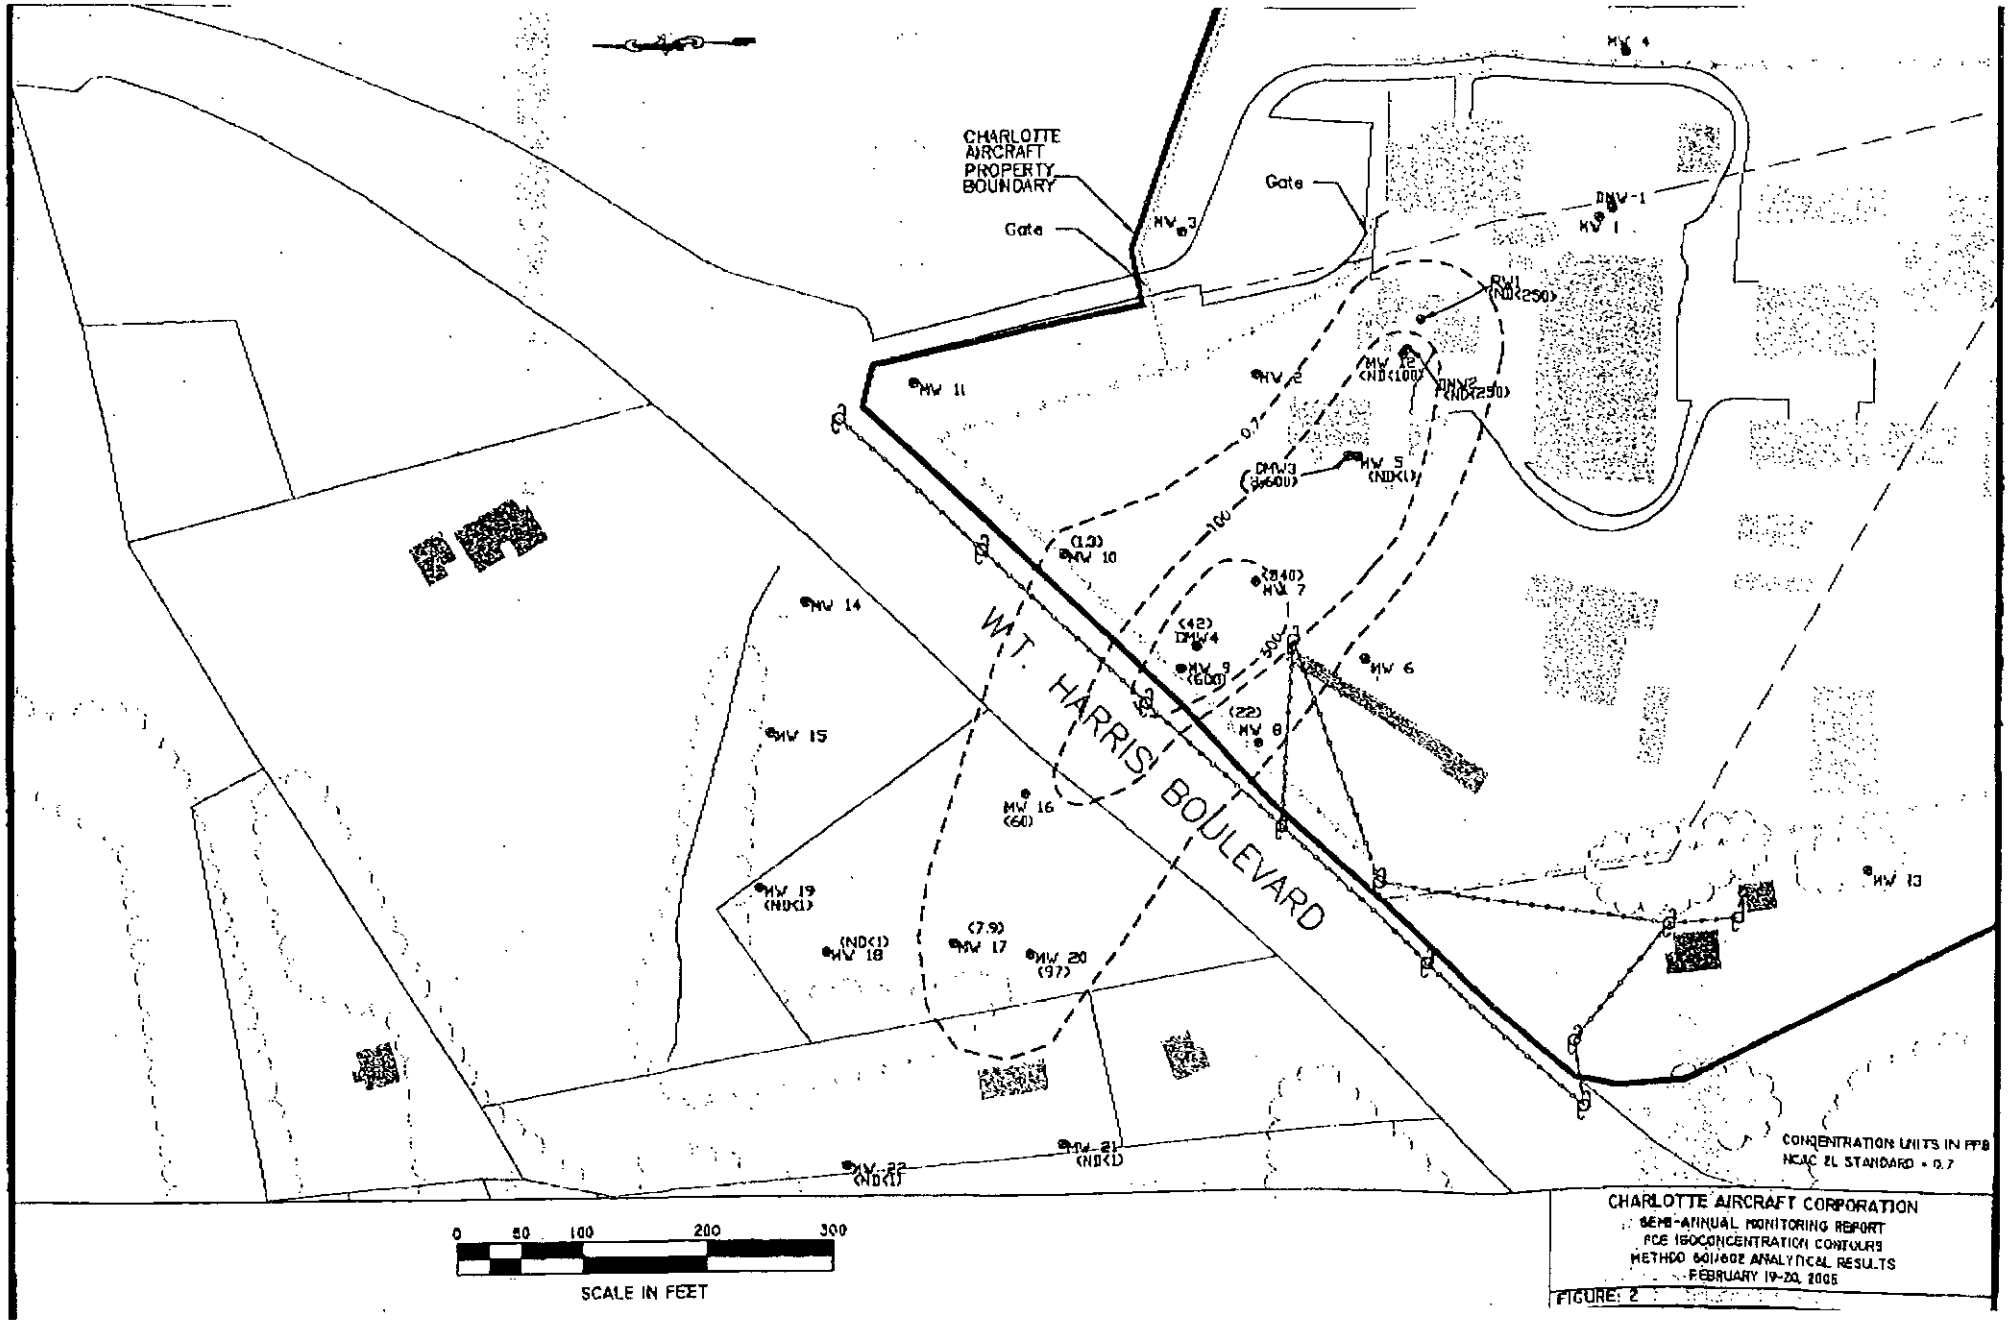

Is a public water supply (other than transient or non-transient supply wells) available to the proposed job location?

If No	Well allowed, but construction requirements apply. Sampling requirements may apply pending hydrogeologic review.
If **Yes**	**Is the well within the first 1000 feet of the ARGU?**
If No	Well allowed, but construction requirements apply. Sampling requirements may apply pending hydrogeologic review.
If **Yes**	**Permit denied.**

Reviewer Comments: This permit is denied because the entire parcel is within 1000 feet of known groundwater contamination and an alternate water source is available.
