Reference: Property located at: 6360 Theo Drive
6562 Loughlen Circle
6554 Loughlen Circle

Dear Ms. Carr:

At your request, Bill Harlin, Soil Scientist with this department conducted site evaluations of the above referenced property. During the investigations, it was noted that two of the lots have sanitary sewer lines crossing them. The additional lot is within 200 feet of the sanitary sewer system.

In light of this fact, it is recommended that you contact the Charlotte-Mecklenburg Utility Department regarding the feasibility of connecting structures constructed on these lots to the municipal sewer system.

If there are any questions concerning this matter, please contact me at 376-4603.

Sincerely,

Bill D. Hardister, Jr.

Re: Property located at 6554 Loughten Circle, Charlotte, NC

Dear Sir:

At your request a soils investigation was conducted on the property designated above. Results of this investigation, showed the site to be classified unsuitable for the installation of a ground absorption sewage disposal system. A copy of the site evaluation report is enclosed for your information.

North Carolina General Statute 130A-335 and 10 NCAC 10A .1948 (c) provides that:

> Sites originally classified as UNSUITABLE may be used for soil absorption disposal systems, provided engineering, hydrogeologic, and soil studies indicate to the local health department that a suitable septic tank system or a suitable alternate system can reasonably be expected to function satisfactorily. Such sites may be reclassified as PROVISIONALLY SUITABLE upon submission to the local health department and when requested by the local health department to the state agency of the following:
>
> (1) Adequate substantiating data to indicate that a ground absorption system can be installed so that the effluent will receive adequate treatment;
>
> (2) Adequate substantiating data to indicate that the effluent will not contaminate any drinking water supply, ground water used for drinking water, or any surface water;
>
> (3) Adequate substantiating data to indicate that the effluent will not be exposed on the ground surface or be discharged to surface waters where it could come in contact with people, animals, or vectors.

Upon receipt of a request for reclassification as provided for above, the submission of plans and specifications for an applicable sewerage treatment system, and the approval of such system as submitted, the department will issue the appropriate permits.

If I may be of any assistance, please feel free to call.

Sincerely,

Bill D. Hardister, Jr.
Environmental Health Supervisor
