PLOT PLAN

This is to certify that a percolation test has been run and an on-site inspection made by the Mecklenburg County Health Department on the lot described above. The said test was conducted on that portion of the lot as indicated on above plot.

The percolation rate determined by the test was **55 min./in.** The said lot is approved for the installation of an individual septic tank wastewater treatment system with subsurface, soil absorption effluent discharge subject to the following terms and conditions:

1. A permit to construct the specific system and to operate it from the Mecklenburg County Health Department prior to beginning any work on the lot and prior to any water using system on the said lot.
2. The septic tank and wastewater treatment system will be installed according to the determination by the Health Department as to the proper location with respect to the size and type of building constructed thereon.
3. The approved system will be installed on the area designated on said plot plan where the test was run.
4. The approved system will be installed only after the building permit and any other permit required on the lot which the Health Department alleges to be applicable to the proposed facility and only on a lot suitable for the installation of the system at the time of issuance of such permit.

This approval is granted based on the laws of the State of North Carolina and the rules and regulations of the North Carolina State Board of Health and the Mecklenburg County Board of Health which were in effect on the date of issuance and is void if at any time in the future, prior to the completion of the system, these laws, rules, and regulations are changed such that this approval would not have been granted had the new or revised laws, rules, and regulations been in effect on the issue date.
