RE: Property located on Providence Road, West, file No. 7360A

Dear Mr. King:

A preliminary investigation of soils and topography was made on your property located on Providence Road West (tax parcel No. 223-281-04). A soils map was made and a copy is enclosed.

The unshaded areas on the map appear to be dominantly acceptable for the installation of on-premises-waste-disposal-systems. These soils have a clay subsoil horizon that is blocky with respect to structure. The depth to saprolite or ground water is greater than 36 inches. These soils occur on the broad, gently sloping areas of the property.

The shaded areas appear to be dominantly unacceptable for the installation of on-premises-waste-disposal-systems. These areas dominantly consist of drainageway depressions and complex slope areas. The drainageway-depression areas collect and channel surface water runoff from the surrounding land areas. Some surface flooding could occur in the flatter areas during periods of heavy precipitation. The complex slope areas have precipitation. The complex slope areas have experienced erosion and are generally too rough for the installation of on-premises-waste-disposal-systems.

The property has large areas that appear to be dominantly acceptable for the installation of septic systems. Please note that this report does not express or imply any site or lot approvals. No lots were marked as of April 16, 1991. Approval of a lot or site depends in part on the completion of a soil investigation of a designated area. This is a large parcel of land and soils other than those observed may occur. Any lots developed on this tract will require that a 100% repair area be available. Please contact me if you have any questions concerning this matter.

Sincerely,

Kelly Randall
