FROM: W. Everette Lynn, Jr. WEL
Soil Scientist

SUBJECT: APT #6348 (Brief Road Development Company)
Lot No. 5, Baxley Lane
11-2-73

Soils were found to be of the Cecil series and imperfectly drained alluvial soils.

The alluvial soils occur on the east portion of the lot and have a seasonal high water table. This factor results in inadequately slow permeability and percolation rate. This portion of the lot is also subject to flooding.

The Cecil soils occur on the west portion of the lot. These soils have good drainage, good aeration and moderate permeability.

It is recommended that the lot be granted conditional approval for installation of a septic tank system with design based on a 60 min./in. perc. rate. The system must be located in the area of Cecil soils as specified on the "Percolation Test Report".

PLOT PLAN

This is to certify that a percolation test has been run and an on-site inspection made by the Mecklenburg County Health Department on the lot described above. The said test was conducted on that portion of the lot as indicated on above plot.

The percolation rate determined by the test was 60 min/in* The said lot is approved for the installation of an individual septic tank wastewater treatment system with subsurface, soil absorption effluent discharge subject to the following terms and conditions:

1. A permit to install, construct, alter, or repair the specific system shall be obtained from the Mecklenburg County Health Department prior to the beginning of any construction of buildings, or of the wastewater treatment system on the said lot.
2. The size of the septic tank wastewater treatment system which must be installed will be determined by the Health Department prior to installation based on the percolation rate obtained above, and on the size and type of building constructed thereon.
3. This approval is valid only if the system is installed in the immediate area where the percolation test was run.
4. This approval is void if any grading, filling, or construction (including the drilling of a well) is performed on the lot which, in the opinion of the Health Department, renders the area where the percolation test was run unsuitable for the installation, construction, alteration, and/or repair of such a system.

This approval is granted based on the laws of the State of North Carolina and the rules and regulations of the North Carolina State Board of Health and the Mecklenburg County Board of Health which were in effect on the date of issuance and is void if at any time in the future, prior to the completion of the system, these laws, rules, and regulations are changed such that this approval would not have been granted had the new or revised laws, rules, and regulations been in effect on the issue date.

*Results determined by soil analysis.
