RE: Property located at Hiwassee Road

Dear Mr. Wilson:

At your request, a field investigation was conducted on the property designated above and was classified unsuitable for the installation of a ground absorption sewage disposal system. A copy of the site evaluation report is enclosed for your information.

Sites classified as unsuitable may be utilized for soil absorption disposal systems provided engineering, hydrogeologic, soil and environmental studies indicate that a suitable septic tank system or a suitable alternate system can be reasonably expected to function satisfactorily.

Should you desire to file for permission to install an alternate system, plans and specifications prepared by a person with a demonstrated knowledge of ground absorption sewage treatment disposal systems, soil and rock characteristics, groundwater hydrology and drainage systems should be submitted to this office. They will be reviewed and if it is found that the system may be reasonably expected to function satisfactorily, approval will be given upon the execution by you of "Septic Tank Agreemnt Form" provided by this office.

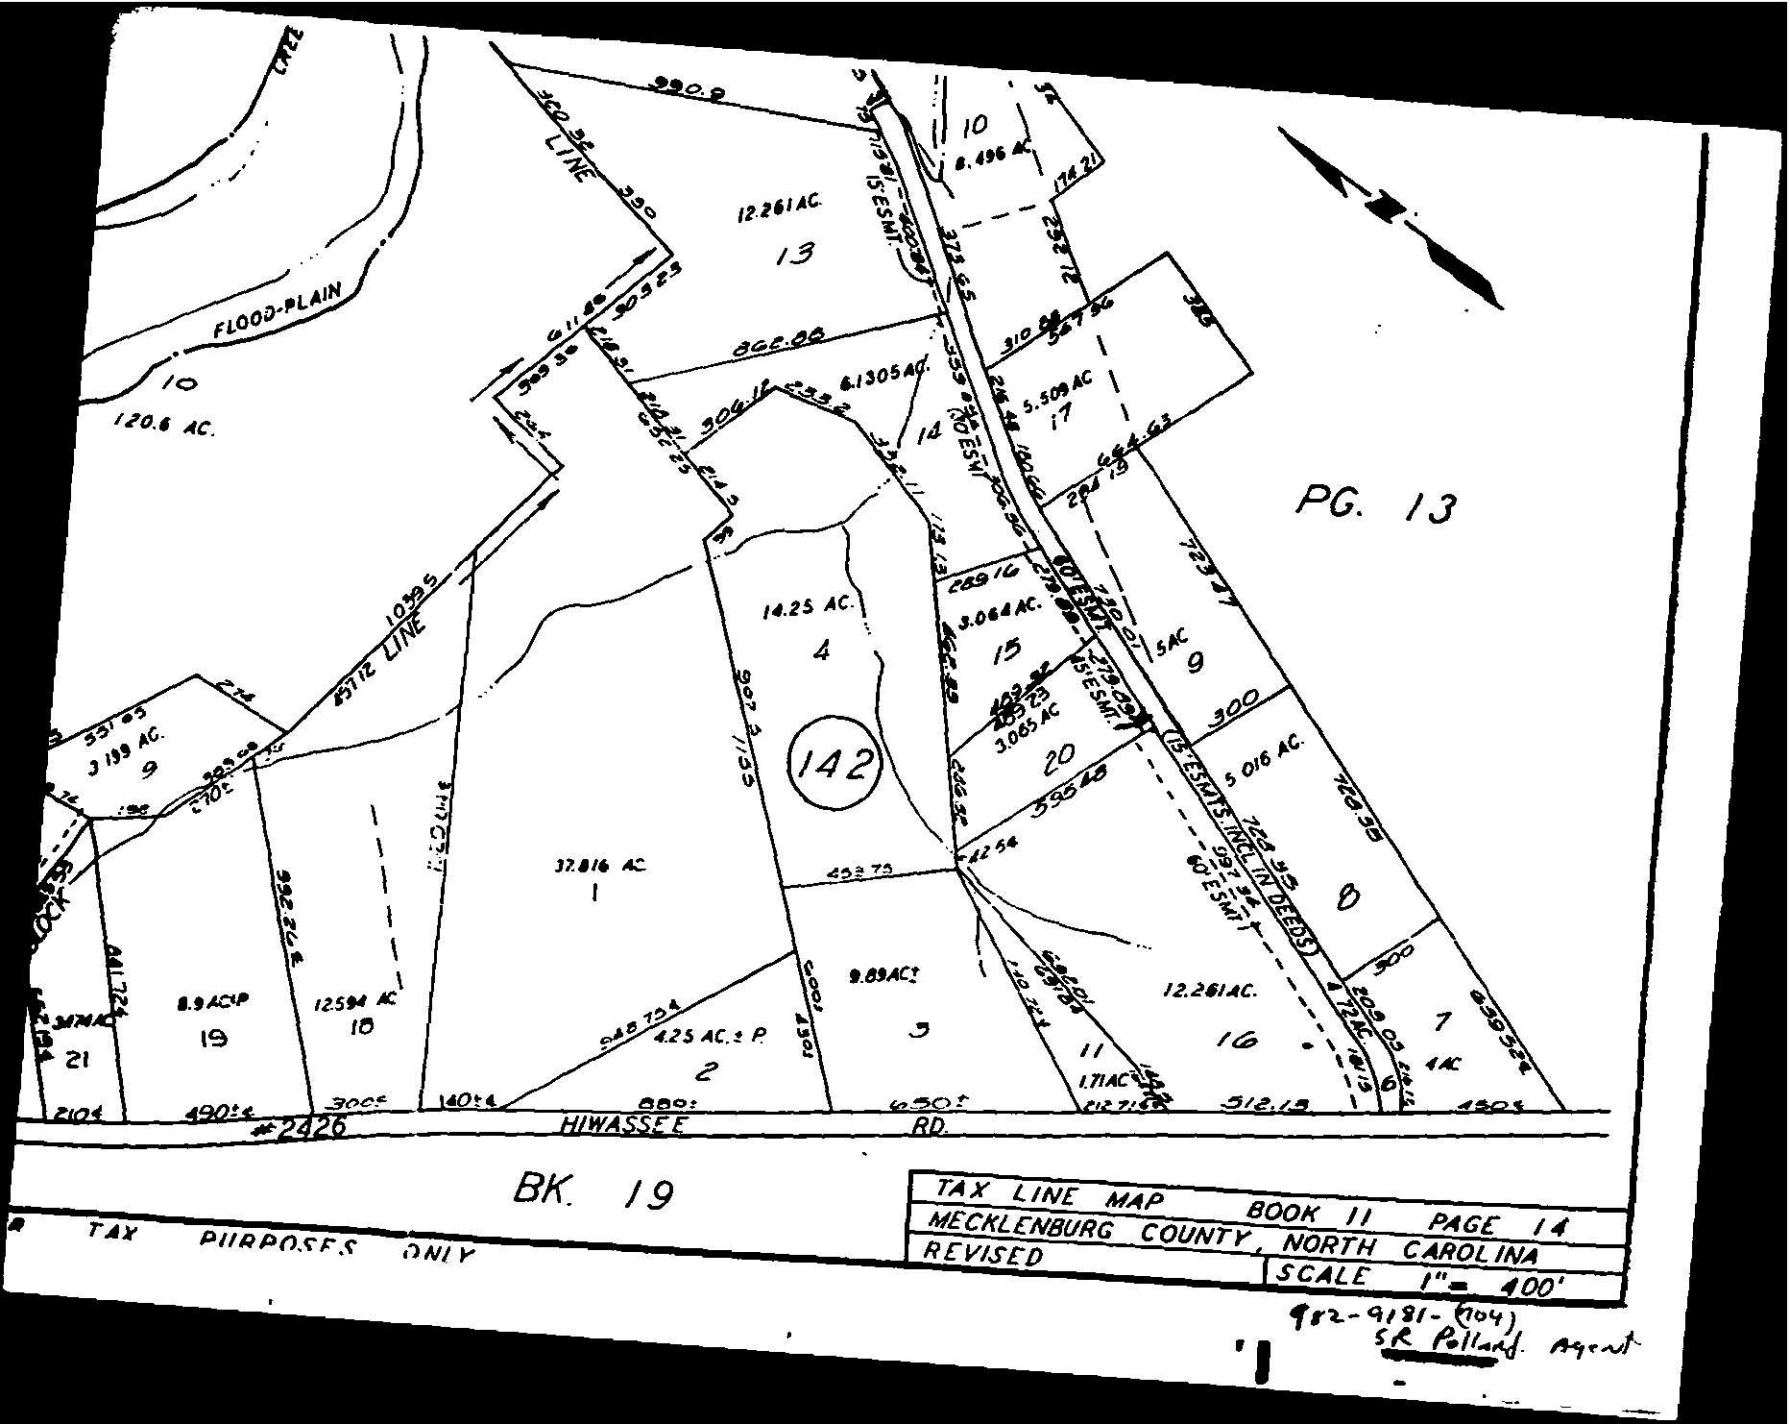

If I may be of assistance, please feel free to call.

Sincerely,

Bill D. Hardister, Jr.
Environmental Health Supervisor

Dear Mr. Sloop:

Subject: Property located at 13430 Hiwassee Road
File: 20300

Receipt of the plans and specifications for a modified system of sewage disposal proposed for installation at the above referenced property is hereby acknowledged. Upon receipt of the plan, a review was made of the material on file and a site evaluation was conducted. The plan was then reviewed in conjunction with provisions of 10 NCAC 10A .1900, "Laws and Rules for Sanitary Sewage Collection, Treatment and Disposal". Our comments are listed below:

1. An effluent loading rate of .5 gallons per day per square foot of absorption area in Wilkes soils is not appropriate for a 4-bedroom home. A .2-.3 loading rate would be more appropriate.

2. The sectional drawing of the trench inaccurately depicts the stone placement. At least six (6) inches of stone should be placed under the pipe and two (2) inches above the pipe.

3. A copy of the recorded deed would validate your comment regarding the date of the deed.

4. The lot must be cleared enough to make a visual inspection of the proposed layout. You are advised not to perform any grading, filling, or construction on the lot prior to receiving approval from this department.

5. Substantiating data has not been submitted to indicate that the system would provide adequate treatment to the effluent, would not allow effluent to come in contact with any ground or surface waters, and that the system would not allow effluent to be exposed on the surface of the ground

For these reasons, the plan as submitted is disapproved.

Please be advised that our recommendations serve as no guarantee towards the success of the system. It is the opinion of this department that systems installed in unsuitable soils rendered provisionally suitable through the use of modified or alternate systems may be reasonably expected to function in a satisfactory manner based on past experience with similar systems utilized in Mecklenburg County. However, the homeowner must recognize the fact that the soils are unsuitable on this property and any system installed in such soils may malfunction regardless of the design of the system.

If you have any questions regarding these matters, please do not hesitate to contact me.

Very truly yours,

Sylvia D. Daniel, R.S.
Environmental Health Supervisor
